Making NCD prevention and control a priority in Afghanistan

The Afghanistan NCD Alliance is working for the prevention and control of NCDs by raising awareness among the general public and advocating at high level to make NCD policies a priority in the national health agenda.

NCD Alliance full member & national NCD alliance

About the Afghanistan NCD Alliance

The Afghanistan NCD Alliance has been founded in September 2018 by a group of young professionals, including public health experts with experience in NCD control and prevention.

Our work focuses on NCDs and their risk factors, we collaborate with the Ministry of Health to make NCD a priority in the health agenda to improve the national health system. In addition, we are conducting public campaigns to raise awareness about NCDs at community level and we organise workshops to train health care workers (doctors, nurses, midwives and more) on NCD prevention and control.
