
Dismantling remaining barriers to be trans fat free by 2023

Language English

<https://ncdalliance.org/news-events/event/dismantling-remaining-barriers-to-be-trans-fat-free-by-2023>

This virtual event will focus on what is working well in industrially produced trans fatty acids (iTFA) elimination strategies with a particular regional focus, and on where gaps to achieve iTFA elimination still exist, particularly looking at commercial entities in the food supply chain that have not yet been reached by regulation or voluntary commitments. It will provide an opportunity for the World Health Organization (WHO) and representatives of governments and civil society to highlight wins in achieving the goal of an iTFA-free world by 2023 and to review progress made since the launch of WHO's REPLACE action package in May 2018.
